1 Product Introduction

1.1 Brief Introduction

C-DATA presents the industry's leading GPON solution of FD1508GS, which complies with the relevant standards of ITU G.984.x and FSAN. FD1508GS is 1U Rack mount equipment, 8pon ports, 8 GE uplink optic ports, 8 GE uplink electric ports. The maximum optical coupling ratio of 1:128, up to 1024 GPON ONTs. The down link band width is 2.5Gbps and uplink bandwidth is 1.25Gbps. The product is in compact design and convenient for flexible using, easy to deploy with high performance. It can meet the requirements of equipment performance and compact volume of the room environment. It can also satisfy the requirements of the access network and enterprise network that enhancing the network function, improving the reliability and reducing power consumption. The product is suitable for the "triple play" service, the resident of optical access network, video surveillance network, enterprise network and the Internet of the network applications.

FD1508GS in GPON system

1.2 Functional Features

Comply with ITU-T G.984/G.988 standards and China's Telecom industry GPON standards
Support OMCI remote management of ONT/ONT, compatible with ITU-984.4 OMCI protocol

Standalone 1U 8PON compact design of OLT products
FD1508GS provides 8 GPON ports, 8 uplink GE optical ports + 8 uplink GE electric ports, 10 Gigabit card expansion slot provides 2*10Gigabit SFP+ uplink port. Each PON port supports 128 ONT, total 1024 ONT for one chassis. Support dual power supply redundancy, 220VAC and -48VDC mixed.

The complete layer 2 switching function
OLT is with powerful layer 2 switching capacity and complete layer 2 protocol. Supporting with the exchange, isolation and One By One working mode. Supporting port aggregation, VLAN, port speed, queue technology, flow control technology and ACL rich two layer function. Offering the technical support for the development of the multi-service fusion.

The QOS security
GPON products is with complete DBA function and excellent ability of QoS service. DBA provides a variety of QoS for the GPON system by means of four types of bandwidth and five types of T-CONT. It can meet different business flow of time delay, jitter and packet loss rate of different QoS requirements.

Easy-to-use management system
Support CLI management, complying with OMCI standard. Realizing the business management through OMCI channel protocol, including the ONT function parameters, type and number of T-CONT business, QoS parameter, configuration request information and performance statistics, automatic notification running event system, the realization of OLT on ONT configuration, fault diagnosis, performance and security management.

1.3 Appearance and Interface

The FD1108S 1U high Pizza-Box, can be mounted into the standard 19” rack. Demission of machine frame: 440mm(L)*391mm(W)*44mm(H).

As shown below:
see the following table:

</tr>
</tbody>
</table>

## 2 Pre-Installation Preparation

### 2.1 Power Requirement

The input voltage must be stable, no EMI noise and distortion.

- When use DC power supply, the input voltage is -48VDC, the allowed range is -36 ~ -72 VDC.
- When use AC power supply, the input voltage is 110/220VAC, the allowed range is 90 ~ 264VAC.

*Note: Follow all security specification and the rule about the electricity in the locality or the building. All power supply must be legal.*
2.2 Equipment Ground

The grounding body must be configured in the machine room, the grounding resistance value is less than 1Ω. It can be realize by layout the anti-static copper nose.

2.3 Room Design Requirements

The environment of the equipment operation has very big effect on its long-term reliable operation. Room design requests to up to the following standards:

- The device allows room temperature is 0 °C ~ 40 °C. To ensure that equipment works in the normal temperature environment (25 °C or so), should try to make the equipment away from the main heat source (such as power supply, etc.), if the environment temperature is higher than 40 °C, should try to improve the ventilated condition of the room, such as install fan in the frame or air conditioning in the room. The ventilation pipe in the room should be swept clean and ventilated, etc.;
- There must be the good cable wiring and go line space in the room. Cable and optical cable wiring (including fiber splicing work) are already in place.
- The related humidity 10%~95%, No condensation, no frost;
- The dust particles density with more than 5 μm in diameter ≤3.0*10^4/m^3; Dust particles is a non-conductive, the non-magnetic and the non-corrosive;

3. Hardware Installation

3.1 Open package and checkout

According to the packing list or supply contract, check and verify the goods, if any component is loss, wrong or damaged, please contact with your customer manager. The list includes the following content normally:

- 1 OLT Machine(1 Pcs)
- SFP modules are ordered according to user requirement
- AC power line or DC power line according to user requirement
- RJ-45-to-DB-9 console cable

3.2 Pre-installation Preparation

Verify the following working environment and installation requirements

1 Power Supply Requirement:
   - DC power supply: -48V DC, the allowed range: -36VDC~ -72 VDC
   - AC power supply: 110/220V AC, the allowed range: 90 ~ 264VAC
2 The equipment should be equipped in the dry, cool place, at least have 10 centimeters at both sides for the ventilation space.
3 Avoid the direct light, far away from the heat source or the place with the stronger electromagnetic interference
4 If want to install OLT inside the rack, ensure that have the necessary mounting screws and nuts and necessary tools.
5 Check the required cable and connectors for installation
6 In the system management, need connect the following equipment with OLT:
   - A management platform, such as PC
   - RJ45/DB9 RS232 Console line

3.3 OLT Installation

OLT can be put in the bigger horizontal surface or within the standard EIA 19" rack.

3.3.1 Plane stack installation

Step I: Pre-Installation Validation
- Ensure the worktable is strong enough to support the weight of the device and cables.
- Ensure no obstacles on the worktable and the surroundings affecting the installation of the device exist.
- Prepare the OLT device to be installed and move the device to the place where is near the work table and facilitates the handling.

Step II: Lift the OLT device and slowly move to the front of the worktable.
Step III: Move the OLT device to the location slightly higher than the worktable and then place the OLT device to the specified location on the worktable.

3.3.2 Rack Installation

OLT equipment can be installed inside 19" rack which is compliance with ETSI standard. OLT rack diagram as shown in below.

![OLT Rack Diagram](image)
The installation process is as follows:

Step I: Pre-Installation Validation
- Ensure the cabinet is fixed and the installation location of the OLT device in the cabinet is well arranged, and no obstacles inside the cabinet and the surroundings affecting the installation of the device exist.
- Prepare the OLT device to be installed and move the device to the place where is near the cabinet and facilitates the handling.

Step II: Lift the OLT device and slowly move the device to the front of the cabinet.

Step III: Lift the OLT device to the location slightly higher than the tray or sideway of the cabinet, place the OLT device to the tray or sideway of the cabinet and then push it to the cabinet.

Step IV. Use screws to fix the suspension loops of the cabinet to the square holes of the 19-inch cabinet column and to fix the OLT device to the cabinet.

3.4 Port and Connection

The chapter describes the port and power supply connection situation in OLT system, mainly include the following parts:
- Uplink Port
- PON Port Connection
- Ground Cable Connection
- Management Port Connection

Please carefully read the following introduction before connecting each port of OLT:

3.4.1 Uplink Port

3.4.1.1 Port Explanation

OLT offers eight GE electrical port, eight GE SFP optical port and two 10 Gigabit port for uplink. Electrical port and optical port can combination at the sometime, you can use direct-through, cross cable or fiber connection of the OLT and uplink equipment.

SFP module can be the optical module or the electrical module, and follow standards below:
- 1000Base-LX (Long wave length)
- 1000Base-SX (Short wave length)
- 10/100/1000Base-TX (Electrical port)

When use the single mode optical fiber, the maximum transmission distance can be up to 10-40km; when use the multimode fiber, the maximum transmission distance is less than 500 meters.

Gigabit Ethernet uplink port supports the duplex mode and flow control auto negotiation. But need note that the maximum length of the optical fiber is related
with work mode of the optical fiber:
- Maximum length of 1000Base-LX fiber is depend on duplex mode
- Maximum length of 1000Base-SX fiber is the same in both full duplex and half duplex mode

### 3.4.1.2 Port Connection

There are two kinds of uplink network connection:
- Cable with RJ45 connectors at both sides
- Cable with LC connector at both sides

Decide the port type of OLT according to the port type of the uplink device (Switch or Route)

### 3.4.1.3 Method of making cable

If you use SFP optical module, cable specification: the optical cable with LC connector at both sides.

If you use GE copper interface, cable specification: Category 5 cable or Category5 super cable with RJ45 connector at both sides.

The below the reference for making STP (Shielded Twisted-Pair) cable with RJ45 connector at both sides

< 568-A Diagram

### 3.4.2 PON Port Connection

FD1508GS support eight GPON SFP slots, every SFP GPON slots can mount a GPON
SFP module and provides one PON port.

*Caution: When insert into optical cable, please confirm the connector is inserted into the correct position, thus guarantee the good contract.*

SFP PON slots installs standard ITU-T.G.984.2Class B+ or ITU-T.G.984.2Class C+OLT SFP. The OLT SFP interface is SC/PC. Please use the patch cord with SC/PC connector to connect between the OLT and the ODN networking.

### 3.4.3 Ground Cable Connection

Ensure the safety and reliable working of OLT. FD1508GS should be connected with the ground if necessary. Grounding screws are located in the rear panel. While connecting, you should use screwdriver to loosen the grounding screw first, then connect the ground cable, finally tighten the screws.

### 3.4.4 Management Port Connection

OLT FD1508GS equipment provides console interface (marked as “CONSOLE” RJ45 type port) and MGMT management internet access (marked as “MGMT” RJ45 type port).

Console access is really only required when initially configuring a device, or if remote access fails. Console access requires:

- Console cable: RJ-45-to-DB-9 console cable
- Terminal emulation software: HyperTerminal

The cable is connected between the serial port of the host and the console port on the device. Most computers and notebooks no longer include built-in serial ports. If the host does not have a serial port, the USB port can be used to establish a console connection. A special USB-to-RS-232 compatible serial port adapter is required when using the USB port.
### 3.4.5 Power Supply

#### 3.4.5.1 Connecting the AC Power Cable

The two AC power supply units in the FD1508GS allow for 1 + 1 power redundancy. If one power supply unit fails, then the system will continue to operate using the remaining power supply unit. Additionally, to ensure true AC line input redundancy for the OLT, you should connect each AC power cable to a different AC power source. You can also connect an uninterruptible power supply (UPS) between each AC power source and the OLT to increase the availability of the OLT.

1. Get the supplied AC power cords from the OLT’s shipment kit.
2. Connect one end of each AC power cord into the AC power inlet connectors located...
at the rear of the OLT.
3. Connect the other ends of the power cords into AC wall outlets. Connect each AC power cord to a different AC power source if you want AC line input power redundancy.

3.4.5.2 Connecting the DC Input Power Cable

1. Identify the parts that you will use to assemble the DC input power cable
   The following DC connection cable is required to assemble one or more DC power input cables. These cables connect the -48V DC input source(s) to the power supply units.
2. Turn off power from the DC power source through the circuit breakers.
   Caution - Do not proceed with these instructions until you have turned off the power from the DC power source through the circuit breakers.
3. Get a DC input plug from the ship kit.
4. Locate the four wires coming from the DC power source that will be used in the connection to your unit:
   - -48V: negative terminal
   - -48V: Return (positive terminal)
   - -48V: Earth ground
5. Unscrew the screws, the cable wire fixed on the DC screw.
6. Repeat Step 5 for the other two wires to complete the assembly of the DC input power cable.

3.5 OLT working status checkout

3.5.1 Check out power supply

Before you connect the power supply, double check the power supply if it is accord with the power supply requirements, if each module and card are installed correctly, If the equipment is in reliable grounding or not. After checking everything is OK, you can turn on the power supply sources.
3.5.2 Check out OLT’s working status

Please check if the OLT’s working status from following aspects:
- Check the power LED. The power LED will be on.
- The SYS LED will flash per second.
- If the uplink equipment is connected to the uplink port, the relevant connection LED is on.

3.5.3 Network Management Checkout

Local Command Line Interface Management:
Use the RJ45/DB9 Serial Port cable (in package) to link management PC with FD1508GS CONSOLE or MGMT port. Management computer can access to OLT equipment from Super terminal interface of the PC for configuration.

※Please refer to relevant CLI user manual.

4 Default Configuration

4.1 Network Parameter Configuration

Management Port
- IP Address: 192.168.1.100
- Subnet Mask: 255.255.255.0
- Default Gateway: 192.168.1.1

4.2 CONSOLE Parameter Configuration

- Band Rate: 9600
- Data Bit: 8
- Parity Check: NO
- Stop Bit: 1
- Flow Control: NO
4.3 Default Username and Password

Local Command Line
Username: root
Password: admin
